

Leveraging Hyperledger Fabric for Biomethane Certification

Samuel Venzi

- Blockchain experience since 2018
 - Hyperledger Fabric since 2018
 - Hyperledger Besu since 2021
- CTO at **GoLedger** since 2020
 - Leading Brazilian vendor
 - Public and Private sectors
- Contributor on Hyperledger projects
- Core maintainer of Hyperledger Labs
CC-Tools

Petrobras

PETROBRAS

- One of largest oil and gas companies in the world
- Petrobras produces, refines and transports oil and natural gas
 - (and much more)
- To reduce its carbon footprint, Petrobras deems important to use biofuels in its energy matrix

Biogas and Biomethane

- **Biomethane** is a combustible gas obtained from **Biogas**
- **Biogas** is produced by the **decomposition of organic matter** (biomass)
- **Biomethane** contributes to **reduce greenhouse gas emissions**, since it captures methane that would be released into the atmosphere
- Biomethane is used in
 - Fuel for vehicles (common in some regions in Brazil)
 - Electrical and Thermal energy generation
 - Injection into natural gas pipelines
- The **Biomethane market** in Brazil is **scattered**
 - Small producers in a large country
 - Petrobras has a hard time buying in this conditions

Regulation in Brazil

- **RenovaBio** promotes the use of biofuel in Brazil's energy matrix
 - Aims to reduce greenhouse gas emissions
 - Fuel distributors have to meet decarbonization targets
 - This regulates the market for **CBIO** credits
- Biomethane
 - Our project **anticipates** regulation regarding biomethane
 - Biomethane **plants are certified** and biomethane batches produced generate a **GASREC certification** that can be commercialized
 - In Brazil, the GASREC certifier is **Totum Institute** who is a partner of both **GoLedger** and **Petrobras**

Connections for Innovation

- A program to **promote innovation** within Petrobras
- Our project was part of the Start-ups Module
 - Partnership between Petrobras and Sebrae to foster the development of solutions for given challenges
- 2022 Edition: **Challenge 26** – Carbon Reduction
 - *Develop a system with **an agile and user-friendly platform** for **purchasing biomethane** from **various certified producers**, using **Blockchain technology as a reliable and auditable tool**. This solution will enable market development by facilitating the **integration of Petrobras with agents**, [...]"*

What's GoBiomethane?

- **GoBiomethane** is a marketplace platform for trading biomethane gas and its certification.
- It is developed with
 - **Hyperledger Fabric** for the network
 - **Hyperledger Labs CC-Tools** for the chaincode
 - Plus Hyperledger artifacts like SDK

Features

- Management of participants of the process
 - Agents participating in the negotiation flow
 - Products, delivery points and delivery methods
 - Buy and sell proposals.
- Detailed accounting dashboards.
- Flexible negotiation process.

New Buy Offer

Expiration 2023-11-30
Supply Start 2024-01-01
Supply End 2024-01-31

Product: Biomethane.
Quantity: 1000.
Unit Price: 30.

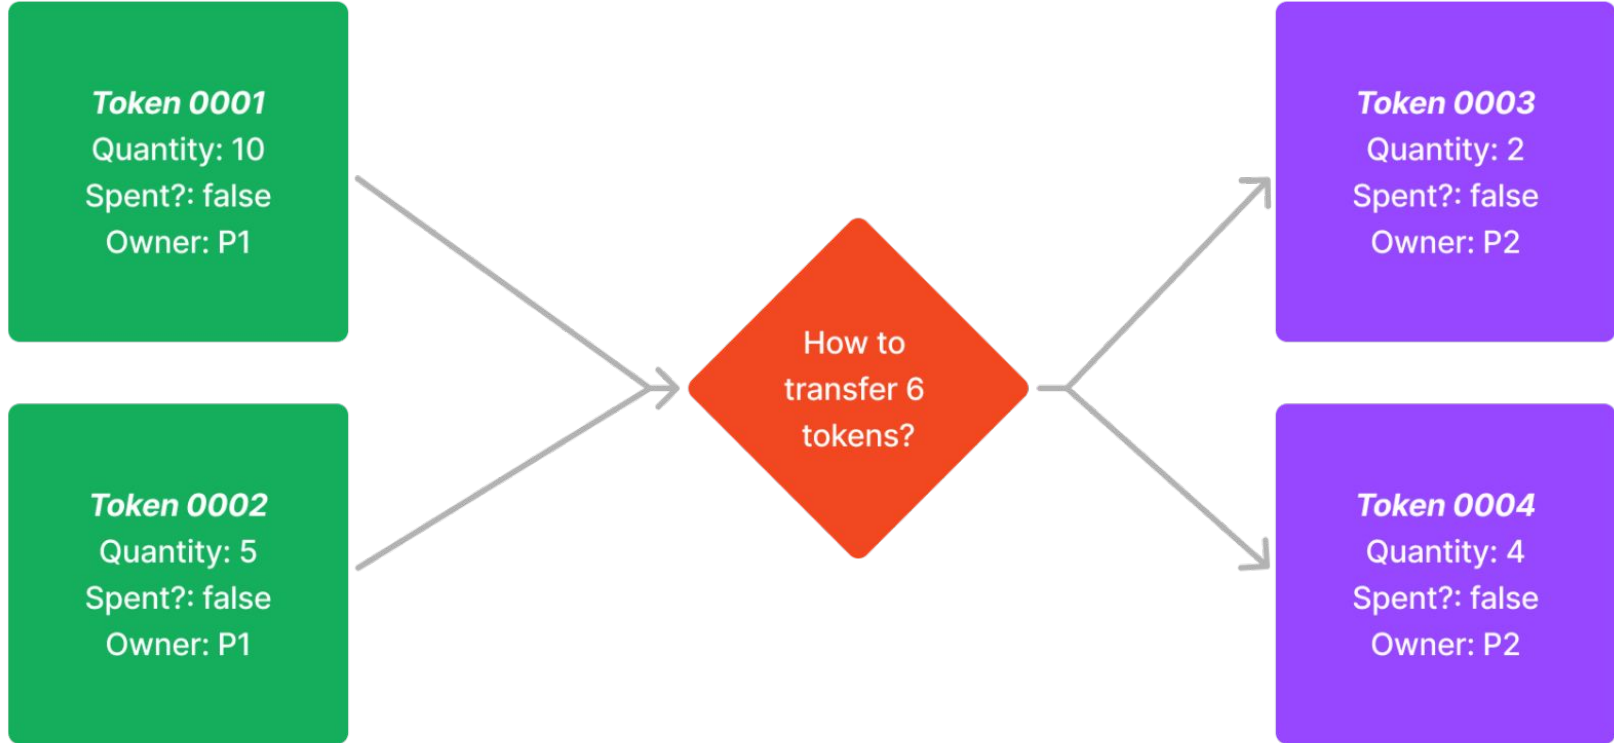

Product: GASREC.
Quantity: 1000.
Unit Price: 10.

Batch: 10203.
Expiration: 2023-11-25.
Delivery Method:
Pipeline.
Delivery Location
Location.

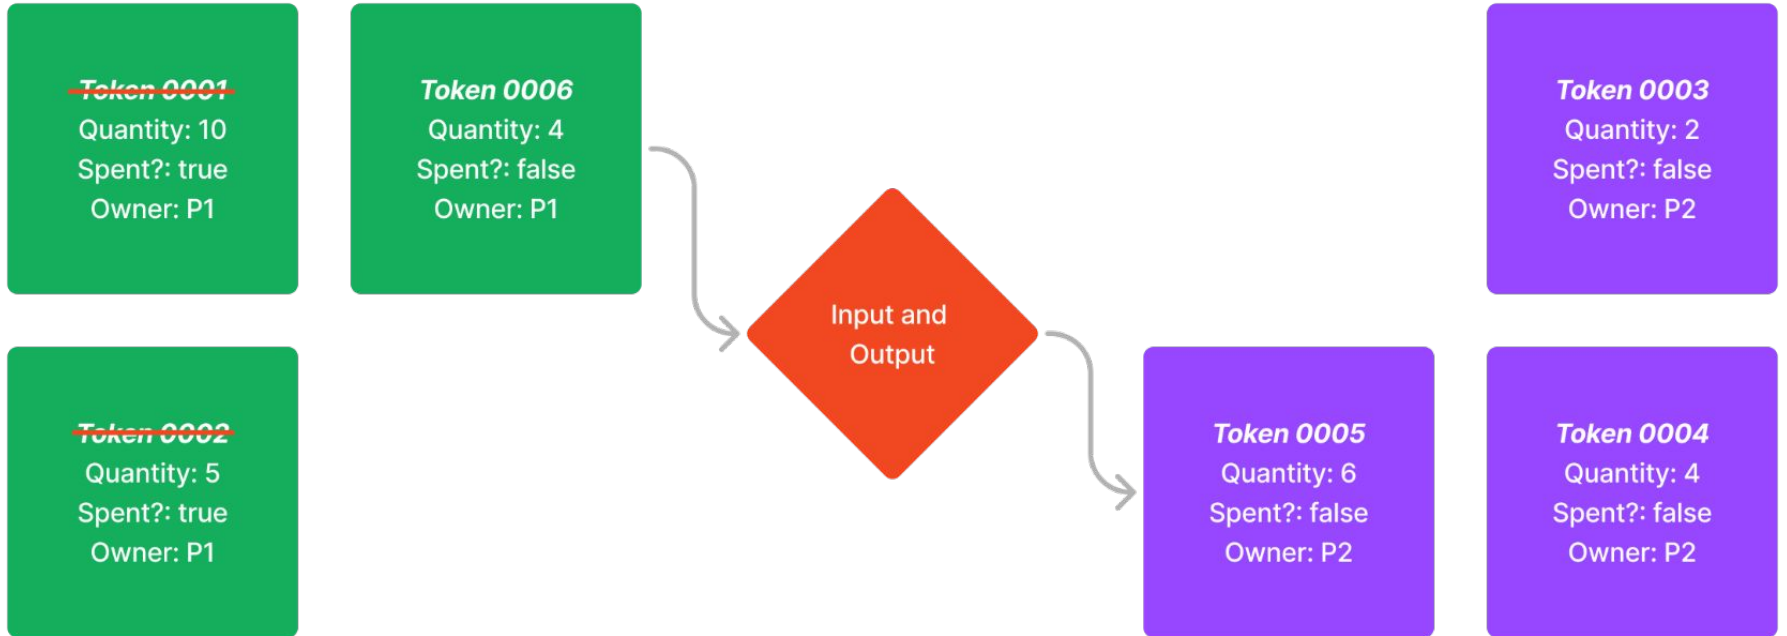

Biomethane
Quantity: 1000.
Unit Price: 35.

GASREC
Quantity: 1000.
Unit Price: 12.

UTXO Tokenization

Layers of the architecture

Software-as-a-Service

- Accessible via interface
- Individual users

Platform-as-a-Service

- Accessible via REST API
- System level integration

Infra-as-a-Service

- Nodes connected to the blockchain
- Block replication
- Transaction execution

Deployment of the Network

- Network deployment is completely done through **GoFabric**
- **GoFabric** allows
 - **Organization creation** and management
 - **Collaborative** network management
 - **Scaling peers** and orderers
 - Deploying **Client APIs**
 - Deploying **chaincodes**
 - **Monitoring** resources
 - **Provisioning** infrastructure resources
